

Business is growing for Flygprestanda in the Middle East

Dubai, UAE — 08 December 2010 — Flygprestanda is this year exhibiting at the MEBA show in Dubai for the second consecutive time. Since the the 2008 edition of MEBA, the amount of customers from the Middle East has increased significantly, to reach almost 10% of Flygprestanda's total customer base. Today the company serves around 200 operators worldwide with various aircraft performance services

The growth is a result of increased presence in the region, together with Flygprestanda's impressive airport database containing up to date information on around 6000 airports worldwide. Good runway and obstacle data is crucial when calculating aircraft performance for take off and landing.

“We have an excellent coverage of airports in the Middle East.” says Andreas Bjernklev, Asst. Sales Manager at Flygprestanda. “The data quality is also very good despite the lack of terrain and obstacle information in the AIPs of some Middle Eastern countries.” he continues.

Flygprestanda has developed a software for evaluating terrain anywhere in the world, an important tool for the Airport Analysts working at the company.

When no aerodrome obstacle chart is published in the AIP for a certain airport, Flygprestanda can with this software still evaluate the terrain situation and design safe engine failure procedures which the performance calculations are based upon.

“The terrain evaluation software gives us an unique opportunity to offer reliable airport data in all parts of the world.” says Joachim Löwenberg, Support Manager.

Flygprestanda AB, a pioneer in aircraft performance calculations, was founded 1969.

For 40 years Flygprestanda has been in the forefront of providing aircraft operators of all kinds with high quality services. Today Flygprestanda is serving around 200 customers worldwide from the head office in Malmö, Sweden and continues to lead innovation in this part of the aviation industry with its well known Web-Services, Performance GURU, Web-Apps and Flight Operations Control System FOCS.
